EDUCATION

University of California, San Diego

Master of Science in Business Analytics

La Jolla, CA

Jul. 2024 – Dec 2025

Rutgers, The State University of New Jersey – Rutgers Business School

Bachelor of Science, Business Analytics & Information Technology and Marketing

New Brunswick, NJ

Aug. 2019 – May 2023

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, R, Javascript, HTML/CSS

Technologies: PyTorch, Tensorflow, AWS, Django, Docker, Flask, Git, MongoDB, Snowflake, Spark, Tableau

Libraries: pandas, NumPy, Matplotlib/Seaborn

EXPERIENCE

Co-Founder & Data Analyst

Yrean, LLC

July 2023 – Oct 2024

Highland Park, NJ

- Orchestrated an end-to-end e-commerce venture from 0 to 1, directly managing cross-functional operations spanning product sourcing, supply chain evaluation, dynamic cost structures, and digital marketing strategies.
- Analyzed order and transit-time data across 50+ suppliers using SQL and 6,000+ customer records using Python(Pandas, NumPy); drove supplier negotiations and relocated regional fulfillment center, cutting lead times by 21% and boosting product profit margins by 12%.
- Executed NLP and sentiment scoring on post-purchase text reviews using Python (NLTK) to diagnose systemic product defects; engineered data-driven product improvements that successfully triggered an 18% MoM increase in positive customer ratings the following month.

Marketing Analytics Intern

Wedding Salon

Sep 2022 – Dec 2022

New York, NY

- Executed and analyzed email marketing campaigns using Salesforce CRM and email marketing platforms, tracking open rate, click-through rate, and response metrics to support onboarding of 50+ wedding vendors.
- Supported planning and post-event performance analysis for a bridal exhibition with 50+ vendors, contributing to a 17% increase in brand recognition and increased post-event inquiries.

Product Analytics Intern

Julius Influencer Marketing

July 2021 – Aug 2021

New York, NY

- Supported migration and restructuring of 2,000+ client and campaign records into a revamped CRM system, improving data accessibility and retrieval efficiency by 32%
- Synthesized research findings and performance insights to support client adoption and platform promotion efforts across 50+ clients.

PROJECTS

Customer Churn Strategy & CLV Optimization | *Python, XGBoost, Scikit-learn*

Jan 2025 – Mar 2025

- Model Performance Lift: Built a predictive machine learning pipeline on a 1,000,000+ subscriber dataset, engineering a case-weighting framework to resolve a 50% vs. 2% data imbalance and achieving a robust 0.69 AUC using Logistic Regression.
- Leveraged model feature importance and Partial Dependence Plots (PDP) to systematically isolate critical churn triggers across usage and device lifecycles.
- Transformed risk scores into 5 customized proactive campaigns, utilizing a 5-year (60-month) Dynamic CLV model to capture a \$93.12 net profit lift per customer.

Procurement & Supply Chain Data Pipeline | *Snowflake, SQL, Python, XML*

Jan 2025 – Mar 2025

- Automated multi-source ELT data pipeline using Python to extract data from a PostgreSQL database, 41 monthly CSV purchase orders, and semi-structured XML vendor invoices.
- Integrated real-time external NOAA climate and geospatial datasets via Snowflake Marketplace, applying latitude/longitude mapping algorithms to benchmark supplier zip codes against local weather stations.
- Constructed optimized Materialized Views to perform correlation analyses quantified how extreme weather disruptions drive vendor logistics surcharges and pricing fluctuations to mitigate macro supply chain risks.
